

Launch a DoS Attack from Android using Low Orbit Ion Cannon (LOIC)

ILABS
CEH PRACTICAL

@mmar

Low Orbit Ion Cannon (LOIC) is an open-source network stress testing and Denial-of-Service (DoS) attack application. LOIC performs a DoS attack (or when used by multiple individuals, a DDoS attack) on a target site by flooding the server with TCP or UDP packets with the intention of disrupting the service of a particular host. People have used LOIC to join voluntary botnets.

Aim

In this task, we will use Low Orbit Ion Cannon (LOIC) on the Android mobile platform to launch a DoS attack on a target machine.
