

Enumeration with Carbon Dating

We can use Carbon Dating recon technique to find the age of blog or a website.

For this, we will use the tool carbon14.

- Carbon Dating (Finds the age of the blog):

```
python3 carbon14.py <POST URL>
```

So, with this technique we are able to find out the actual age and time where a particular post is published. This type of technique is more useful for online investigators and journalist who are tracking a particular website and its activities.
