[MyAut2Exe.tk](#)

[myAutToExe2_11_src.7z](#)

...yes finally it also supports fully the new AutoIt 3.26++ files.

[->related forum](#) for comments/bugreports...->related docs: [Deobfuscating_AutoIt Files](#) | [Dumping Armadillo&Thermida packed files](#) | [Decompile AHK](#)[camo](#)[OverlayFileDumper2.0alpha.7z](#)

[Microsoft Visual Basic 6 Portable](#)

Yes that's the original VB6 ready for use - without any installation required.

Hint: Use it to debug myAutoToExe :)

Missing comctl32.ocx or mscomctl.ocx ? -> [Common Controls](#)Like getting nearly all the rest (ComDlg32 RichTx32, MSFlxGrd...) -> [VB6.0 SP6](#)This will also localize ya VB6 to **the language you selected for download.**

...and just for da case ;) := Manual installation hints :=

Installing additional VB controls extract comctl32.cab from vb6.0_sp6
rightclick on comctl32.inf and choose 'install'

Alternative install methode: '<winsystem32>Regsrv32.exe comctl32.ocx' (...as an example)

Do da localization: Extract Vs6sp6B.exe!VS6sp6B2.cab:VB98\vb6ide.dll

... and especially because of it's nice search function to manage the code I recommend:

MZ-Tools 3.0 - for Visual Basic 6.0
